

THE ARRIS AUTHORIZED REFURBISHED CPE LICENSE PROGRAM

We are pleased to announce the launch of the ARRIS Authorized Refurbished CPE License program. This new program helps us meet the strong demand from our customer base for reliable sources of refurbished customer premises products. ARRIS has engaged two trusted partners, Advanced Media Technologies (AMT) & Adams Cable Equipment (Adams Cable), to facilitate the purchasing, refurbishing and reselling of churned or excess CPE to Service Providers seeking a cost-effective option for deployment. We look forward to working with AMT and Adams Cable as we formally launch the program and communicate it to our customer base.

How it works

ARRIS has engaged AMT & Adams Cable as our only authorized refurbished CPE license partners and is committed to assisting them with introductions to Service Providers that are seeking to resell churned or excess CPE products. ARRIS will provide both AMT & Adams Cable with authorized software licenses for each refurbished product and access to the latest firmware, equipment and processes needed to test and upgrade the CPE products. ARRIS does not provide any warranty or support for refurbished product sold through this program. AMT & Adams Cable will stock and resell the products as ARRIS Authorized Refurbished CPE to cost-sensitive customers throughout the North Americas, Caribbean and Latin American markets. ARRIS will provide AMT & Adams Cable with a per product software license and sell-through reports so that ARRIS can maintain a record of the ownership for software license tracking purposes.
