PRODUCT OVERVIEW

The TKA1310-TLxx series 1310 nm Optical Transceiver Modules feature high-speed communications functionality required for selected ARRIS’ digital networking products such as the DT4250N-xx Universal Digital Transceiver.

Conforming to the Small Form Factor Pluggable (SFP) Multisource Agreement, these state-of-the-art components are designed expressly for high-speed communication applications that require rates of up to 4.250 Gbps, with the laser transmission portion of the device operating at a wavelength of 1310 nm.
The TKA1310-TLxx module features a very low jitter contribution, resulting in extremely clean, high-quality eye patterns. And the module’s metal enclosure not only makes it sturdier, but also improves its FCC test margins. This emission and ESD control is particularly important in applications with sensitive multiport hubs and switches. The module operates at extended temperature range (−40° to +85°C) and typically dissipates less than 1 Watt. Modules are supplied with a duplex LC connector.

The TKA 1310-TLxx series SFP transceiver modules support 3 optical transmission distances: TKA1310-TL2 for 2 km, TKA1310-TL10 for 10 km, and TKA1310-TL40 for 40 km.

The TKA1310-TLxx SFPs can be ordered as an optional plug-in transceiver module to support the primary or secondary ring capabilities of transceiver units in NC2000 and NC4000 series nodes and VHubs.
