AgileMax® 1RU
AM3217A CWDM
Complete OBI Elimination
HPON™ Distribution Solution

FEATURES

• Eliminates Optical Beat Interference (OBI) from RFOG networks, allowing operators to deploy high capacity, FTTH networks that leverage the DOCSIS® infrastructure
• Multiple CWDM upstream transmitter wavelength options for re-transmission to headend or hub
• Dedicated upstream and downstream ports
• Enables DOCSIS 3.0 and DOCSIS 3.1 upstream and downstream network capability
• Expands network reach and adds capability for higher split ratios in the optical network
• Compatible with standards-based 1550/1610 nm RFOG deployments, integrating seamlessly with existing headend and customer premise equipment

PRODUCT OVERVIEW

The ARRIS AgileMax® is an exciting new breakthrough in RF-over-Glass (RFOG) FTTH network technology. Replacing the optical splitters commonly found in traditional RFOG architectures, next-generation HPON™ powered by AgileMax optical distribution technology allows operators to completely eliminate Optical Beat Interference (OBI) from their networks—even in networks with multiple, active upstream lasers. By eliminating OBI, operators can significantly expand their networks’ upstream and downstream capacity and data speed without changing back office infrastructure. As a result, AgileMax deployments overcome the cost, scalability, and capacity restrictions that limit RFOG performance, while greatly reducing operational complexity in these networks.
CWDM Upstream Options for Segmentation

AgileMax AM3217A units have a dedicated CWDM Return Transmitter that is available in multiple wavelength options. The transmitter provides a return link back to the headend or hub, enabling several AgileMax modules to share a common return fiber.

Future-Proof Current Networks

As operators migrate to higher-capacity DOCSIS 3.0 (and eventually DOCSIS 3.1) networks, they will need a way to eliminate OBI without compromising network performance. The ARRIS HPON solution powered by AgileMax meets this need by enabling DOCSIS 3.0 and DOCSIS 3.1 network capability, allowing operators to maximize the potential of their fiber infrastructures.

Long Reach, Large Splits

The AgileMax solution provides the flexibility to expand optical reach and split ratio, allowing operators to more easily deploy new FTTH networks as needed to support growing customer demand. AgileMax network deployments also can easily achieve twice the reach of traditional RFoG. By using AgileMax instead of passive splitters, operators can achieve service groups up to 1024 ONUs to a single headend optical receiver port with absolutely no OBI in the upstream.

### AgileMax Common Specifications

| Optical Connector                     | SC/APC |
| PON Wavelength Compatibility (See Note 4) | 1260 – 1360 nm, 1480 – 1500 nm, 1575 – 1581 nm |
| Input Voltage Range                   | 22–26 Vdc |
| Maximum Input Voltage (+24 Vdc)       | +29 VDC |
| Operating Temperature Range           | –40°C to +60°C |
| Operating/Storage Humidity Range      | 5 to 95%, non-condensing |
| Dimensions                             | 1.72 in H x 19.00 in W x 11.25 in D (4.37 x 48.26 x 28.575 cm) |
| Weight                                 | 8.5 lbs (3.86 kg) |

**NOTES:**

1. Upstream output power is +3 dBm, with the presence of upstream optical input on any distribution port within the specified wavelength and optical input range. If there is no upstream optical input power present on the distribution port, the upstream output power level will be approximately -6 dBm or lower.
2. For a cascaded AgileMax architecture, the upstream optical input range is 0 to +3 dBm.
3. > ~ 1 dBm optical input recommended for optimum performance.
4. PON needs to be injected externally to the AgileMax on the Downstream Common Port. The HFC 1611 nm ONU Upstream has a dedicated port.
