Optical Node Series (NC)
OP41SxS
Optical Splitters with Balanced Outputs

FEATURES

- Single compact plug-in modules for NC4000 series Optical Nodes
- High density fiber interface with Elite MPO connectors
- Low insertion loss
- Dual operating wavelength windows (1310 nm and 1550 nm)
- High port-to-port uniformity

PRODUCT OVERVIEW

ARRIS’ OP41SxS series plug-in modules provide splitters with 8-, 16-, or 32-way balanced outputs for the VH4000 Virtual Hub and NC4000 series Optical Nodes. These compact designs, with 8-port Elite MPO connectors for the split outputs, feature very low insertion loss and high port-to-port uniformity in dual operating wavelength windows. Where some amplification of the incoming signal level is desired prior to its being split, FA4500 series EDFA modules are also available for these nodes.
